Penetration Testing Services
Letter of Attestation
Wicket, LLC

Introduction

Cacilian is a CREST Pentest certified, Security Services organization through its affiliate, Prescient Security LLC. Cacilian provides comprehensive information security solutions for Global 1000 companies, offering expertise in IT risk, identity management, and in-sourced security services. Our clients, spanning industries such as finance, insurance, media, manufacturing, retail, pharmaceuticals, and government, rely on us for a full range of services, including security architecture, policy design, vulnerability assessment, penetration testing, multi-framework audits, project management, and digital forensics.

Scope

The objective of application penetration testing is to detect design and implementation weaknesses in Applications that could be used by an attacker to gain unauthorized access to information, to damage the reputation of Wicket, LLC or its clients, or to impair normal business operations.

Periodic penetration tests are a precautionary measure to safeguard Wicket, LLC's information assets and achieve information security at all times.

Cacilian has developed a documented, proprietary methodology for conducting penetration testing of web-based applications, mobile applications, and network infrastructures. This letter attests to Cacilian's successful completion of penetration testing of Wicket, LLC's web-based application(s), (the "Target Application").

Testing

During the penetration test, Cacilian attempted to determine the overall security of the Target Application, perform unauthorized transactions, and obtain confidential information by performing a wide variety of vulnerability checks. Such testing was not intended to be an assessment of every Wicket, LLC network or application, but rather an assessment of the [https://staging.access.wicketsoft.com] only.

Conclusion

Cacilian's analysis is based on the technologies and known threats as of **July 25, 2025,** the date of final testing of the Target Application.

Vulnerabilities within the Critical and High-risk categories pose enough risk that mitigation is always

recommended, and retesting should take place until such vulnerabilities are mitigated.
Final testing revealed no Critical or High vulnerabilities within the Target Application.

Based on the absence of such vulnerabilities, the target application is considered SECURE.

Cacilian makes no undertaking to supplement or update this report on the basis of changed circumstances or facts of which we become aware after the date of final testing, absent a specific written agreement to perform supplemental or updated analysis. Statements made in this attestation and accompanying report reflect conditions found at time of testing and are not to be projected beyond the date of delivery of this report. Projection of any Cacilian's conclusion beyond the date of this document is subject to risk that the validity of such conclusions may be altered as a result of a continually evolving threat landscape. As technologies and risks change, the vulnerabilities associated with the operation of systems described in this report and the actions necessary to reduce exposure to vulnerabilities for which we tested, will also change.
